

Gilden. 1624.

A

New Almanacke, and
Prognostication, for
the yeare of our Lord
God, 1624.

Being Bissextile, or Leape yeare.

Calculated and composed ac-
cording to Art for the Latitude
and Meridian of the Towne of
Shipton vpon Stowre in the
County of Worcester.

And may well serue for all the
South parts of Great Britaine:

By G. Gilden *Orator* &c.

Ludit in humanis diuina potentia rebus.

LONDON,
Printed for the Company of
Stationers.

K. Ephemerides.

Common Notes of moueable Feasts,
according to

The old account vsed
in England.

The new reformed account
vsed beyond Seas.

Gilden, 1624.

A Prognostication published for
this yeare of our Lord and Sau-
our IESVS CHRIST.

1624.

Being Bissextile, or Leape-yeare.

Wherein is set downe according to
Arte, an Astrologically description
of the likely seasons of the Four Quar-
ters of the yeare.

With other matter conuenient
for such a worke.

By G. Gilden. φιλόμαθῃ.

Ludit in humanis Diuina potentia rebus.

LONDON,
Printed for the Company of
Stationers. 1624.

To the Reader.

Ourteous Reader, seeing that all our annual Almanackes are commonly published for the vse and behoofe of the common people: I haue held it best for their better vnderstanding to be as plaine therein as possibly I could; and therefore haue written little in this Almanacke and *Astronomicall Table*, but what (with small paines euen of the simplest) may be easily vnderstood. And because the predictions of the weathers dispose, are commonly by the cōmon sort taxed of vntruth, I haue (as I haue formerly vsed) thought good onely to set downe the Aspects of the Moone and the rest of the Planets, for the Iudicious to find out of themselues, which being reduced into twelue columes, for the seuerall Monethes, I haue set them in my Prognostication, seeing the Table annexed is much pertinent thereunto: for the better vnderstanding whereof and the like tables, if any be desirous to enrich their vnderstanding with Mathematicall knowledge, he shall find the workers both of ancient and moderne writers so plentifully, as that there were neuer better or neerer helpes for the attayning thereof, then are at this present,

To the Reader.

sent, as may well bee proued by those excellent workes and inuentions that haue lately beene published, as those admirable Tables of Logarithmes, inuented & published by that Honorable Lord *Iohn Nepair*, & since by my learned friend Master *Edmund Gunter*, who hath also lately set out the vse of the Sector, with diuers other worthy workes: Also the *Arithmetical Jewell*, inuented by M. *William Pratt*, who teacheth the vse thereof in the City of London. There are also many new inuented excellent Instruments for the *Mathematicks* made in London, in wood, by my very good friend M. *Iohn Thomson* in *Hosier-lane* neere *Smithfield*, and in Copper by Master *Elias Allen*, at his house ouer against *S. Clements Church* withour *Temple Barre*. Whereupon I conclude, that the attayning of those excellent Arts is now far easier, then at any time in former Ages they haue been. And so for this time I bid thee farewell.

Thine, *G. Gilden.*

A

A necessary rule to know the beginning and ending of euery Terme, with their Returnes.

Hillarie Terme beginneth the 23. daie of Ianuary, and
endeth the 12 of February, and hath foure returnes.

Octabis Hillarij. }	{ Craftino Purifica.
Quind. Hillarij. }	{ Octabis Purifica.

Easter Terme beginneth the 14. of Aprill, and ends
the 10. of May, hauing five Returnes.

Quind. Paschæ. }	Mense paschæ. }	Quinque paschæ. }
Tres paschæ. }		{ Craft. Ascen.

Trinitie Terme beginneth the Fryday next after Tris-
nitie Sunday, and endeth the Wednesday fortnight af-
ter, and hath 4 returnes. that is to say,

Crafti. Trinitatis. }	{ Quind. Trinitatis.
Octabis Trinitatis. }	{ Tres trinitatis.

Michaelmas Terme beginneth the 9 day of October,
and endeth the 29 of Nouember, and hath 8 Returnes,
that is to say.

{ Octabis Michael. }	{ Craft. Animarum. }
{ Quind Michael. }	{ Craft. Martinj. }
{ Tres Michael. }	{ Octabis Martinj. }
{ Mense Michael. }	{ Quind. Martinj. }

Note that the Exchequer openeth Eight dayes before
any Terme begins, except Trinity Terme, in which
it openeth but foure dayes before.

A briefe Declaration of the disposition of the foure quarters of
this yeare. 1624.

Of Winter.

When the Sunne, the fountaine of heate and light, hath made its farthest progresse to the limits of his greatest Obliquation in this age, to the quantity of 23. degrees, and 31. min. then fallen from our Zenith 75. degr. & mounted at the highest, vpon y^e Meridian, but 15 deg. by the Oblique projection of his rayes through the watery & cold vapours of the ayre, bringing very little heate to these Northerne parts, and least continuance with vs of all the yeare, from his rising to his setting being but 7. houres and a halfe, which happened the last yeare the 12 day of December, The instant moment of the Sun his entrance into y^e first poynt of Capricorne, being at 2 of the clocke early in the morning of the same day, giuing the beginning, to this quarter, according to Astronomical computation, which iumps not precisely, with the season of the yeare in these Northerne parts, so that they stand rather for the beginning of Nouember to the beginning of this quarter & Candlemas the latter end, so that during that space the Earth seems to haue drawne backe her fructifying heate & warmth, the sure badge
of

A Prognostication.

of Winter in this scituation. Albeit indeed it cannot be denyed, but in the other scituation on the other side of the Line with our Antazians, it is their Summer, and in other nearer parts to the Lyne nereabout the Tropick of Capricorne, as Peru, Omaguas, Brasilia, Congo, Æthiopia, Noua Guynca, are the Inhabitants scorched with the extreame heate of the Sun.

This quarter in these parts, will contrarywise shew the extreamity of winter with vs, in great frosts, stormes, and Tempests, as you may gather by your owne experience, if you will make vse of the Tables and directionshereafter delinered, for knowledge of the dispose of the weather.

Of the Spring.

The Spring (begins according to Astronomical computation) vpon the 10 day of March at 2 of the clocke in y^e morning, the sun then entering the first poynt of the Æquinoctiall signe Aris, is elevated above our Horizon at Rome, 38 deg: and 40. minu: causing an equall interchange of light and darkenesse of night and day throughout the whole world, excepting vnder the poles, where the Inhabitants (if there be any) shall for a fortnight, or there weekes at least, both together, haue the continuall fruition of the light and heate of bright Phebus before

Gilden. 1624.

and after this day, albeit they are Antipodes each to other, which might seeme a strong Paradox, but that the great Refractions in these Clymats (as was obserued by the Hollenders in their Portherne voyage to Noua Zembla) may make the reason obviouse, for which cause also it commeth to passe, that the day is alwayes apparantly longer then it is in truth by 4 or 5 minuts of tyme, and the night alwaies so much shorter.

At the beginning of this quarter, the weather is like to be seasonable, but ouermuch tempestuous at the latter end. For March will be blustering. Aprill showery, but May very tempestuous.

Of Summer.

As the farthest departure from vs, and least eleuation of the Sun, gaue the beginning to the Winter quarter (albeit at that instant is not commonly the greatest extremity of cold) so likewise, now his highest approach in his diurnall reuolution to our Zenith, and highest eleuation vpon the Meridian to 62 dege: bringeth the longest day & shortest night in the yeare, which happeneth this yeare vpon the 12 day of Iune, vpon the 8 houre before none, the same day entring into the Tropicall point of Cancer, sets the first moment of Summer quarter. albeit,

A Prognostication.

albeit, it is not the hottest time thereof; For although, it is the height of the Sun, and perpendicularitye of his rayes, that causeth heate, & therefore might it be inferred, the same now at the highest, should cause the greatest heate, yet because the impression of the cold in the ayre by the winter, is not as yet fully dissolved, and the continuance of this height and heate being but little varied for the space of a Moneth, by reason of y^e very slow declining of the Sun from & about the Tropick causeth y^e heate as yet to increase till the next Moneth following, when it is at the greatest.

The ayre is like to bee disposed diuersly, to tempests about the beginning and latter end of this quarter, but especially at the farewell, the rest reasonable.

Of Autumne.

VPon the 12 day of September, at 8 of the clocke at night, when as the arch flame of light enters into the first poynt of the Dodecatemory of Libra, ballancing the day & night againe, by equall moments of tyme, begins this Autumnall quarter. Now by the temperature of the Ayre, the earth being inuited in these parts to a second Spring, which haue induced diuers Cronologers to conceiue the creation to haue bene at this time of the yeare, so that lately be-
befor

Gilden. 1624.

besoze al things crescent were in their maturity, sitting the perfection of creaton. And the rather for that it was the beginning of the yeare amongst the hebrewes, which they termed Rasaban, or head of the yeare besoze their captivity. But leauing euery one to abound in his owne sence in this poynt Quoniam adhu, sub Iudice lis est. The disposition of the ayre in weather, during this whole quarter, is like to be very seasonable.

Of the Eclipses of this present
yeare. 1624.

TWO Eclipses onely, and those of the Moone will be presented to view, within the Limits of our Horizon.

The first of which will happen vpon the 24. day of March according to our accompt here in England (which is the 3 day of Aprill according to the new stile vsed in foraine parts) at 20 mi: of an houre past 5 a clocke, & ending at a quarter of an houre after 7 at night, & about 3 quarters of an houre after her rising, beginning vnderneath the Horizon out of our sight at 23 mi: after 3 in the afternoone. So that the continuance from the beginning to the ending, will be 3 houres and 52 min: The digits eclipsed will be

A Prognostication.

be 19. that is more then one halfe about her whole diameter.

The second Eclipse of the Moone may be observed from the beginning to the ending in this Horizon, for it will begin to runne into the shadow of the earth, & thereby darkened at 16 min: after 6 in the evening. At her greatest indarkening at 8 a clocke and 13 min: then eclipsed 20 digits or three quarters more then her whole apparant superficies, & will haue got out of the shadow of the earth, and regayned her whole light againe at 9 min: after 10 in the night vpon the 16 day of September.

So that the whole durance, from the beginning to the ending will be 3 houres and 54 min.

The Disposition of the Ayer in more particular.

As much as I haue noted the Aspects of the Moone and Planets amongst themselves, against every day of the Moneth, in these 12. columes following, I thought it would be no lesse conuenient then if setting downe the dayly dispose of the weather, I shall by a table immediately following the said Columes shew how by these aspects you may know the alteration of the weather, whereby you may conceiue, that if by that Table alone, you may come neere to know the change of the weather, the whole Art is not so vaine as it is accompted. The

A Prognostication.

The

**A Table to know
when the Moone
will bee South, for
euery day in the
yeare.**

Daves.	Hour :	Minu :	Day
1	12	46	16
2	1	36	17
3	2	24	18
4	3	12	19
5	4	0	20
6	4	48	21
7	5	36	22
8	6	24	23
9	7	12	24
10	8	0	25
11	8	48	26
12	9	36	27
13	10	24	28
14	11	12	29
15	12	0	30

From the chāg
to the full, the
Moone comes
to the South,
afternoone.

From the full
to the change,
the moone coes
to the South be
fore noone.

the left hand, right ouer against it towards the right
hand I find 4. o. &c. shewing mee her comming to
South to bee iust at foure a clocke in the afternoone.

**The vse of the
Table.**

The age of the moone
being found in the
kalender (that is)
how many dayes is past
from the time of her chang.
Therewith enter this ta-
bel, & hauing found it in
first coluime to the left hand,
if it be before the full moone;
or to the right hand, if it
be after the full moone: you
shall haue in the middle co-
luime, her comming to the
South, before or after as
is noted in the foot of the
Table.

As for example.

The 15 day of January
the Moone is 5 dayes old,
wherewith entring the ta-
ble in the first coluime to

C

To

To know the houre of the night by the Moone on a Sunne Diall.

The time of the Moone comming to South, being found in the former table, in manner aforesaid, looke in a Sun-diall vpon what houre before or after 12 on the diall the moones shadow falleth, for so many houres it is before or after the moones comming to South.

Example.

I find the Moone South, the aforesaid 15 day of Ianuarie at iust 4 a clocke afternoone, looking on a sun-diall, I finde her shadow to fall the 4 houre after 12. on the Diall, wherevpon I conclude, it is iust 8 clocke at night, which is 4 houres after her conuning to south.

Astronomicall Elections for Phy- sicke and Chyrurgery, depending on the course of the Moone.

When the body is filled with naughty and superfluous humors, it is conuenient for thee to draw blood so the heauens consent thereunto, and they are agreed therewith, which being not circumspectly weighed, it may be most dangerous to the patient (whereof no vnderstanding man is ignorant) but when necessitie bzgeth.

As for the Pestilence, Plurisie, Phrensie, &c. then though the Heauens denie, yet a vaine is speedily to be opened; Ad ægri salutem. This considered of medicines, some be purgative, some comfortiue, and others in the meane betwixt both.

Medicines

Medicines purgatiue be either Soluendo or Leni-
do. In the first the M must be in S m or X . For the
ether the M one must be taken when shee worke more
in moistnesse then in drynesse, being in Δ or \ast with J
and you must take heede in the howse of giuing the me-
dicine least the M haue any aspect with H for he congea-
leth the humors, making the medicine worke little.

Likewise let her be free from any aspect with M for
he is the giuer of life, the helper & comforter of the ver-
tues, so that the medicine can but weakely expell the
humors, making the body affected with an euill qualitie.
furthermore, in al purgatiue medicines, obserue these
ensuing rules: for in the administration of Physicke,
are cheifely to be respected 3 things, viz. The time, the
Age, and the manner of administration.

For the time of the yeare.

F or the election of time, consideration is to be had, that
it be not in extremitie either of heate or cold. And
therefore Hipocrat: part 6 and 46 Aphorif. saith, that
the Spring and Autumne are best for Physicke, and
Summer and Winter bad, & to be vled but vpon ne-
cessitie. For in Summer the humors boyle, by reason
of heate, causing great annoyance to mens bodies: yet
if necessitie vze to take Physicke in Summer, it is best
to take it by Vomite, and in Winter (if necessitie re-
quire) by purgation.

For the time of the Moneth.

L et not blood 3 dayes before and after the coniunction
of the M one, and H the like of the coniunction of the
 M and J neither let blood Q and M being in coniunction
whilst Q is combust.

Let nat blood the day before and after the full of the
moone: the like obserue the M being in coniunction with
Saturne or Mars.

A Prognostication.

But the Moone in any Aspect with Υ or ♀ or in a *
or Δ with \bigcirc or ♂ , produceth a fit time to let blood.

The time of the Day.

The Morning fasting is best, or in the Evening after perfect digestion, with this proviso, that ♀ ayre be temperate, and the wind not in the South.

For the Age.

Concerning the Age, you are to vnderstand that decrepite old age, and yong Infants, are vnfit to haue Physicke administered vnto them, or such as be vnder 14 yeares of age, & moze then 56 yeares old, or such as be exceeding fatt, or very leane; and it is also dangerous for a yong man to take much Physicke: For as a learned Philition sayth, he that taketh much Physick when hee is yong, will much repent it when hee is old.

For the age to let Blood.

In youth, from the change to the first quarter.

In middle age, from the first quarter to the full.

In elder age, from the full to the last quarter.

In old age, from the last quarter to the change.

And after bleeding vse not violent exercise, no sleeping, no venery, or gluttony.

The manner of Administration.

For the manner of Physicke administration Albamazars opinion is, that the fittest time for Purgations are to be elected according to the motions of the Moone in watery signes, as ♊ and ♋ .

Others hold opinion that the first halfe of ♊ and ♋ , are fit times, And when the Moone is boyd of course it is indifferent to take purgative medicines.

in

in ∞ in ♀ } not cōbust, is good to aoid cho } with
 ♂ or Δ a- ♂ } is good to purge phleme: (ler } electu-
 spect of ♂ } good to expell melancholy: } aries.

in m in ♀ } } choller } with
 ♂ or Δ a- ♂ } good to purge } phlegme } potio^s
 spect of ♂ } } melancholy

in \times in ♀ } } choler. } with
 ♂ or Δ a- ♂ } good to purge } phlegme } pills.
 spect of ♂ } } melancholy

in \approx in ♀ } } choller. } with any
 \approx in ♂ or Δ with ♂ } good to purge } phlegme. } kind of
 Δ with ♂ } } melancholy } medicine.

But note that you must looke that ♀ be not combust
 and that the ♂ or ♂ or ♂ or ♂ or ♂ either to the ♂ or be-
 tweene themselues doe not hinder the operation of the
 Physicke.

Neither let the ♂ be in any of the signes that
 doe shew the cudde as V , S , ny . for then the medicine
 will stay but a little with the patient, causing him to
 vomit, vnlesse you meane to purge by vomiting.

Also in purging the Melancholy, let not ♂ haue do-
 minion nor ♂ in purging the Sanguine or the liuer, nor
 ♂ the cholericke, nor ♂ the head, nor ♀ in purging the
 lungs.

The ♂ being fortified, it is ill to purge ♀ braine.

In the administratiō of purgations remember Haly
 his commentary vpon Ptolomy who saith, that the hu-
 mors from the change of the ♂ to the first quarter,
 and from the full to the last quarter, doe moue from the
 inward parts of the body, to ♀ outward: And likewise
 from the first quarter to ♀ oppositiō, & also from the last
 quarter to the change, they moue from the outward
 parts to the inward.

A Prognostication.

But the Moone in any Aspect with ♃ or ♀ or in a *
or Δ with ☉ or ☿, produceth a fit time to let blood.

The time of the Day.

The Morning fasting is best, or in the Evening after perfect digestion, with this prouise, that y^e ayre be temperate, and the wind not in the South.

For the Age.

Concerning the Age, you are to vnderstand that decrepite old age, and yong Infants, are vnfit to haue Phisicke administered vnto them, or such as be vnder 14 yeares of age, & moze then 56 yeares old, or such as be exceeding fatt, or very leane; and it is also dangerous for a yong man to take much Phisicke: For as a learned Philition sayth, he that taketh much Phisick when hee is yong, will much repent it when hee is old.

For the age to let Blood.

In youth, from the change to the first quarter.

In middle age, from the first quarter to the full.

In elder age, from the full to the last quarter.

In old age, from the last quarter to the change.

And after bleeding vse not violent exercise, no sleeping, no venery, or gluttony.

The manner of Administration.

For the manner of Phisicke administration Albamazars opinion is, that the fittest time for Purgations are to be elected according to the motions of the Moone in watery signes, as ♊ and ♋.

Others hold opinion that the first halfe of ♊ and ♋, are fit times, And when the Moone is boyd of course it is indifferent to take purgative medicines.

♂ in ♂ in $\left\{ \begin{array}{l} \text{♀} \\ \text{☉} \\ \text{♄} \end{array} \right\}$ not combust, is good to avoid cho } with
 ♂ or Δ a- } is good to purge phleme: (ler } electu-
 spect of } good to expell melancholy: } aries.

♂ in ♄ in $\left\{ \begin{array}{l} \text{♀} \\ \text{☉} \\ \text{♄} \end{array} \right\}$ good to purge } choller } with
 ♂ or Δ a- } phlegme } potio^s
 spect of } melancholy }

♂ in ♄ in $\left\{ \begin{array}{l} \text{♀} \\ \text{☉} \\ \text{♄} \end{array} \right\}$ good to purge } choler. } with
 ♂ or Δ a- } phlegme } pills.
 spect of } melancholy }

♂ in ♄ in $\left\{ \begin{array}{l} \text{♀} \\ \text{☉} \\ \text{♄} \end{array} \right\}$ good to purge } choller. } with any
 ♄ in ♄ or } phlegme. } kind of
 Δ with } melancholy } medicine.

But note that you must looke that ♀ be not combust and that the ☉ ☐ or ☿ or ♄ or ♀ either to the ☿ or be-
 twene themelues doe not hinder the operation of the
 Physicke.

Neither let the ☿ be in any of the signes that
 doe thew the cudde as ♋, ♌, ♍. for then the medicine
 will stay but a little with the patient, causing him to
 vomit, vntlesse you meane to purge by vomiting.

Also in purging the Melancholy, let not ♄ haue do-
 minion nor ♄ in purging the Sanguine or the liuer, nor
 ♄ the cholericke, nor ♄ the head, nor ♄ in purging the
 lungs.

The ☿ being fortified, it is ill to purge ♄ braine.

In the administratiō of purgations remember Haly
 his conuientary vpon Ptolomy who saith, that the hu-
 mors from the change of the ☿ to the first quarter,
 and from the fall to the last quarter, doe moue from the
 inward parts of the body, to ♄ outward: And likewise
 from the first quarter to ♄ oppositiō, & also from the last
 quarter to the change, they moue from the outward
 parts to the inward.

A Prognostication.

Therefore in the first & 3 weekes of the) is best applying externalleuacuations: and in the second and 4 weekes internall purgations.

How the vertues be corroborated.

The vertues be either vitall, animall, or naturall.

The vitall vertues remaine in the heart, the animall in the braine, and the naturall in the liuer.

The vitall vertues are governed of ☉ and ♃.

The animall of ☾ ♀ and ♀

The naturall of ♃ and ♀.

Other vertues be also governed by the Planets, as the vertue attractiue is governed of ☉. The digestiue of ♃. The retentive of ♄. The expulsiue of ☾.

Also the signes doe thus governe the vertues ♃ & ♀ rule the attractiue, ♄ and ♄ the digestiue, ♄ and ♄ the retentive, ☾ and ☾ the expulsiue.

Also the vertues be ruled by the Planets thus ☉ the well-spring of the vertues vitall, ☾ of the vertues animall, ♄ of the receptiue, ♃ of the augmentatiue, ♄ of the attractiue, ♀ of the appetitiue, and ♀ of the imaginatiue.

Therefore when you would fortifie any of these vertues, fortifie the planet signifying the same; & it is done.

In letting of blood, you must know what persons are fit to bleede, and what not: and if they be fit, how it is with the patient inwardly for his complexion and age; and outwardly, for the time of the yeare, and of the moneth as aforesaid.

For Completion.

For the Phlegmaticke, let the) be in ♃, or ♄, when you draw blood. For the Melancholy in ♄, or ♄. For the Cholericke in ♄ or ♄. And the Sanguine in any of the aforesaid.

The vnaccustomed are not to be Phlebotomized, least
it

Gilden. 1624.

it breed some malady, vnlesse necessitie vryge it. And
you must also haue respect to the strength of the person.

*Certaine Elections concerning
Husbandry.*

It is best to plant in the last quarter of the ☾, so that
thee be not aspected by ☿ ☐ 02 8 of ♄ 02 8.

Sow Corne when the ☾ is in ♋.

Fell timber for building from Midsummer to Christmas
in the wane of the Moone.

Seld 02 libbe cattell when the ☾ in ♋, ♌, 02 ♍.

Remoue trees the last quarter of the ☾, betwene All-
hallentide, and Twelfetide.

The latter writers of Husbandry doe report, that
the seedes of tender hearbes, committed to the earth
in an apt time, the Moone being in her first quarter,
doe more speedily shoote vp, then otherwise, especially
being sowne after showers of raine on sunny & warme
places: With obseruation that the wind bloweth not
from the North, at the time of their sowing. And
though the ancient writers of Husbandry, haue pre-
scribed proper moneths and dayes for the sowing of
seedes: Yet may euery man obserue his owne rules
according to the nature of the place and ayer where they
are sowne. So that they consider also, that there bee
some seedes, that by nature doe spring vp faster then
others.

Laus Deo.

FINIS.
